

OPSOMAI

Consultancy and software for the distribution and management of audiovisual and multimedia contents

References

Consulting company dedicated to the audiovisual world, **Opsomai** has a panel of **experts in documentary, technical and marketing fields**. For six years, Opsomai has been working with French and foreign companies, following three main areas:

- **The creation of industrial platforms** dealing with digitizing / indexing / archiving / distribution of audiovisual programs;
- **The automation of control rooms dealing with broadcasting television** channels, production and post-production installations;
- **The design of video and multimedia services on Internet**, and more specifically, of platforms dealing with audiovisual catalogue management and distribution.

At his clients' request, Opsomai was led to develop **the Opsis Media and Orao softwares**, a complete and coherent suite allowing owners of audiovisual catalogues to enter the Internet era and manage, communicate and market their programs. This platform, either directly exploited by the client or hosted by our servers in ASP mode, has already attracted numerous catalogue owners who use it daily in their proprietary and commercial activities. Constantly developing in line with their users' demands, it can even be adapted to a client's specific needs, by Opsomai or by the client himself, the latter having access to the source code for the majority of the softwares.

- > **Adaptability**: modifiable source code

Opsis Media and Orao, an Internet software suite designed for audiovisual archive management, communication and marketing

a professional tool for secure on-line screening

Orao is a hypermedia tool designed to allow audiovisual catalogue owners to provide on-line screening services.

- > **Security**: screening authorisation is obtained through a database access; local copy of the clip is not possible; on-the-fly image insertion of a logo
- > **Ubiquity**: PC & Mac compatibility; handles all the video formats supported by QuickTime, including MPEG-1, 2 & 4; Web client: no software installation needed, QuickTime only required
- > **Functionalities**: fast-forward & rewind and Jog/Shuttle with sound; frame-accurate timecode display; users can define clips on-line and save them in a database
- > **Customisation**: full integration in your existing IT infrastructure through JSP, PHP...; customisable user interface
